PROJECTS

e-STREAM: Event Scheduling, Tracking, Registration, Evaluation, Attendance, and Management System

- Created using Laravel Framework with TailwindCSS and DaisyUI for Front-end, and MySQL for database creation and management
- Created comprehensive event management./creation and attendee online registration and tracking system.
- Created a comprehensive in-system survey creation and answering similar to Google Forms.
- Created a comprehensive event attendee check-in system that utilizes QR code generation and scanning for in-person and hybrid events, and check-in links for online and hybrid events.
- Created a comprehensive in-house certificate creator similar to Canva, that allows admins to just create a design and the system auto-generates the names and sends it to the attendees.
- Created a comprehensive in-system task tracker similar to Jira that utilizes kanban boards that allows event organizers and admins to keep track and be notified with their tasks and updates.
- Created a comprehensive analytics page that shows statistics and analytics of general/specific events, certificates, surveys, and attendee participation.
- Created a comprehensive emailing system and tracking in-system via implementing Mailgun and custom email batching and sending rules.
- Created a comprehensive in-system announcement system allowing admins to post announcements in attendee dashboards, landing page, and email general/specific attendees.
- Created a comprehensive and dynamic landing page and dashboard that allows for admin customization and showing of live events via embedded livestream.
- Created comprehensive in-system audit trails, automated data backups, and advanced system monitoring
- Created a comprehensive and secure role and permission based account access following Zero-Trust and Least Privilege principles.
- Deployed, implemented, and maintained the system in Hostinger and DOST-STII's local server.

AI Powered Legal Docs Assistant

- Created using SpringBoot Framework with TailwindCSS and ReactJS for Front-end and PostgreSQL for database creation and management.
- Implemented OAuth 2.0 login and registration.
- Implemented refreshing and rotating JSON Web Tokens following modern web security.
- Implemented AI text extraction and summarization of document.
- Designed and created the UI of website.

Science and Technology Policy Information System

- Created using Laravel, React, and MySQL
- Built a full-stack system to solve cross-departmental comment inconsistency caused by frequent bill/policy title changes
- Enables rapid retrieval of files for specific bills or policies along with all their linked comments—functioning seamlessly from policy-to-comments and vice versa.

MagiGears: Steampunk FPS Game

- Created in Unity using C# with assets made from blender or taken and bought from the Unity store.
- Created small FPS game set in a steampunk world.
- Implemented weapons and movement system
- Implemented player and enemy hit detection, health, and death.
- Implemented weapon and item drops that was able to be picked up by the player
